

GLEITFÄHIG MACHEN...ABER WIE???

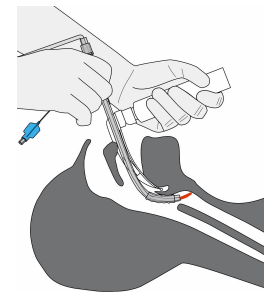

- ▶ Brimacombe J., Keller C. - Recurrent laryngeal nerve injury with the laryngeal mask, Anästhesiol. Intensivmed. Notfallmed. Schmerzther., 1999; 34:189-192, Thieme

Discussion: Lidocaine jelly may have anesthetized the glottis making it more vulnerable to trauma during emergence. „...lidocaine jelly is associated with an increased incidence of intra- and post-operative complications when used as a lubricant.“

- ▶ Keller C., Sparr H. J., Brimacombe J. - Laryngeal mask lubrication - A comparative study of saline versus 2% Lignocaine gel with cuff pressure control, Anaesthesia, 1997; 52:592-597, Blackwell Science Ltd.

Discussion: Our data suggest that lignocaine gel is an unsuitable lubricant for the LMA.

Kein Lidocain-haltiges Gleitmittel
